

Marina Energy LLC

*Where we put all of our energy®
A South Jersey Industries Company*

Resorts Atlantic City

Resorts, Atlantic City's first casino, is an oceanfront boardwalk hotel and casino featuring 878 deluxe guest rooms and suites, a 99,951 square foot casino, 39,000 square feet of convention facilities including seven large meeting rooms and a 12,000 square foot ballroom.

In operation since 1978, much of Resorts' heating and cooling equipment had exceeded its useful life and required replacement. In addition, the internal distribution systems needed to be modernized. To optimize efficiency, Marina Energy purchased and reconstructed the resort's thermal production facilities. Marina replaced most of the required chilling capacity, added variable frequency drives to chillers, pumps and cooling towers, and completely updated the monitoring and control systems. These improvements allowed for expansion of the property which include the new, 27-story luxury Rendezvous Tower.

Marina Energy, through a contract with DCO Energy, operates the revamped \$5 million facility.

Client:	Resorts Atlantic City
Location:	Atlantic City, New Jersey 08401
Services:	Thermal production plant (steam and chilled water)
Project Start:	2002
Commencement:	May 2002
